EXPERIENCE

Cake by VPBank

Mar 2025 – Present

Associate Technical Product Manager – CTicket Platform

- Led end-to-end product delivery for CTicket as sole product owner for a 7-engineer Agile squad (2 backend, 2 web, 1 mobile, 2 QA); achieved **238 bn VND GMV (159% of annual target)** and **8 bn+ VND platform revenue** in 2025 across 30+ shipped features, 96 events, 52 partners, and ~99k customer accounts, with zero critical post-release incidents.
- Launched a multi-surface product suite (consumer ticketing website, SDK embedded in Cake banking super-app, venue check-in mobile app on App Store + Play Store, and a web-based role-based admin portal), and designed per-feature internal config & management portals with built-in data export, by authoring user stories, Figma mockups, workflows, and business rules end-to-end with engineering and QA (no separate BA layer).
- Enabled per-release funnel and conversion analysis by authoring web event tracking specifications and configuring event tracking in Google Analytics 4 via Google Tag Manager; partnered with BI to define KPI dashboards covering revenue, engagement, and partner performance.
- Re-prioritized the product roadmap in real-time for ad-hoc, high-stakes event on-sales by running priority / blocker / risk trade-off assessments with engineering and stakeholders – ensuring event-critical features shipped on time without breaking ongoing platform commitments.
- Coordinated marquee, high-volume on-sales – **G-Dragon World Tour (40,000 tickets per event night)**, **The Spark K-Star (sold out within 1 week)**, T1 Vietnam Fanmeeting, and VPBank International Marathon – by aligning product, engineering, ops, marketing, customer support, and external partners pre- and post-launch.

Cake by VPBank

Jun 2024 – Feb 2025

Technical Product Owner / BA Intern – KYC & Digital Onboarding

- Translated Vietnamese fintech regulatory constraints into shippable product specifications for Cake's digital onboarding product, by partnering with Compliance, Legal, Engineering, and Design to define user stories, workflows, and acceptance criteria in a compliance-heavy environment.
- Supported delivery of **NFC-based identity verification** by authoring 100+ user stories across 8 sprint releases and validating outcomes through usability testing and post-release funnel analysis.

EDUCATION

University of Information Technology – VNU-HCM

2021 – 2025

Bachelor of Science in E-Commerce GPA: 8.83/10 Senior Thesis: 9.7/10 IELTS: 6.5

Relevant coursework: *Business Process Analysis & Design, Business Data Analytics, E-commerce System Design, Online Payment Systems, Software Engineering Fundamentals, Database Systems.*

SELECTED PROJECTS & PUBLICATIONS

Elite Fitness FTISU (iOS App)

2023 – 2025

Product Owner & UI/UX Designer (independent project)

- Shipped an iOS app live on the App Store (Elite Fitness FTISU) by owning end-to-end product delivery from user research and roadmap through Figma prototyping, developer coordination, and release; reduced onboarding and booking drop-off through iterative usability testing.
- Co-authored research on AI-driven personalization in fitness applications, published at **Future Data & Security Engineering 2024 (Springer LNCS)**.

SKILLS & LANGUAGES

Methods: Backlog & sprint management, BA spec authoring (user stories, acceptance criteria, mockups, workflows, business rules), UAT & feature acceptance, roadmap prioritization & trade-off (priority / blocker / risk), pilot delivery via whitelist, funnel / cohort analysis, event tracking spec authoring

Tools: Jira, Confluence, Figma, Postman, Notion, Google Analytics 4, Google Tag Manager, SQL, Git

Languages: Vietnamese (native), English (IELTS 6.5)
